

I believe that privatization for profit can only end in the death of the collective mind. Mutually assured destruction is a single point of failure for humanity. So, don't let it happen, in whatever way you can.

Vasili Alexandrovich Arkhipov is the most important human being to exist since the beginning of the Atomic Era. He prevented WW3. He prevented mutually assured destruction. Read this to learn why:

<https://www.theguardian.com/commentisfree/2012/oct/27/vasili-arkhipov-stopped-nuclear-war>

Dr. Strangelove: Or How I Learned to Stop Worrying and Love the Bomb, is the only logical conclusion of this story. Nuclear Non-proliferation is the only way we can guarantee the continued existence of life, as we know it, on Earth. It's a darkly funny movie. As the nukes are going off, Vera Lynn continues to sing - we'll meet again, some sunny day.

"As long as nuclear weapons exist, the chances of survival of the human species are quite slight.' Every study of long-term risk analysis supports Noam Chomsky's claim." - Edward Wilson, The Guardian - about Noam Chomsky, one of the smartest people I've had the pleasure to see speak.

The room, as I sat with two friends at the time, had a dark atmosphere. Interestingly, it was held in Boston, at a church near Copley Square. I remember walking past that church at some point with a person sleeping outside it. Ironical.

Noam seem very preoccupied with the end of the world. I have continued to be. Some of our best and brightest - the Bulletin of Atomic Scientists - have not set the Doomsday Clock back since 1991. As time has gone on, the division amongst human beings has grown wider. This is what we refer to as polarization. Democrats:Republicans.

In 1991, the two most dangerous collections of humans (USSR/USA), collectively agreed to sign START I. A nuclear disarmament treaty. The majority owners of nuclear weapons, decided together, to reduce the danger to society. The Doomsday clock at that point was set to 17 minutes. It has not stopped increasing since 1991, and this year it was set at 90 seconds. Noam spoke about that at the time, prior to Trump's election, and during his speech he referred to the Republican party as something along the lines of "the most dangerous political party of all time."

At the time, an unstable President was given the keys to the largest nuclear arsenal in the universe. That's a bad idea. And along the path of Trump's failures, are many people who prevented them from happening. Alas, the man still walks free - free to continue proliferating his hate until he dies.

To truly make America great again, we must acknowledge that other nations must continue to succeed. There is likely a correlation between:

developed nation : developing nation

nuclear capable : no access to nuclear weapons

We are all extremely worried about weapons of mass destruction in the wrong hands. But we've continued to allow increasingly STUPID people more and more access to the ability to end all life in the known universe.

I really, really dislike the richest man talking to the world's longest standing dictator.

Putin really began his path to power beginning in 1990.

"In 1990 he retired from active KGB service with the rank of lieutenant colonel and returned to Russia to become prorector of Leningrad State University with responsibility for the institution's external relations." - <https://www.britannica.com/biography/Vladimir-Putin>

In 1991, the START I signed, and since then the world has continued to become a more dangerous place.

Therefore, I do suggest that we keep the most stupid and overpowered dyad from killing all life in the universe, as Elon Musk and Vladimir Putin look on from their Tesla Roadster headed to Mars or wherever else. If Elon Musk and Putin can cause a nuclear war from space, that's GG. Humanity will then be reliant on Elon Musk and Vladimir Putin's genes, with whoever else they select, to pass the torch.

I don't want the next phase of humanity to begin with Elon Musk coercing a non-blonde woman into dying her hair, and having a child with him. I don't know Putin's type, but I don't trust it or his ability to non-coercively get someone to sleep with him. He's sleazy looking, short, and has a bunch of other bad qualities - his power should be reduced unless we want the next era of humanity to begin with bad genes.

The most important thing from the world to walk us back from the brink of post-humanity, is to continue marching towards a better future.

I suggest we do this by learning how to mediate and reduce polarization across the globe.

Putin needs an opposition party. The US needs an opposition party. Currently, the US is an oligarchy controlled by the few against the many, who they continue to divide with social constructs. The one true constant in this equation, is the US - the world's bank, kind of? - continues to depreciate its currency to keep corporate failures afloat.

Corporations, meanwhile, continue to buy each branch of government. The presidency (owned by Putin or neoliberals with money), the Supreme Court (who is the last space for effective discourse, is ruled by people who lied through their teeth to get there), and the Legislative Branch, who has been bought by greedy idiots like Krysten Sinema.

I just read this from Wikipedia:

"She is the [first openly bisexual](#) and the second openly [LGBT](#) woman (after [Tammy Baldwin](#)) to be elected [to the House of Representatives](#) and [to the Senate](#), in 2012 and 2018, respectively.^[8] She also was the first woman elected to the Senate from Arizona^[9] and is the only openly religiously unaffiliated member of [Congress](#).^[10]"

I'm going to assume she mostly ran her campaign on liberal identity politics, and was at one point the single most powerful legislator in the Senate. Now that's a queer I don't trust.

The most important thing the US can do is stop printing money. This will prevent any one human from amassing the power of today's age - currency. See above.

Elon Musk could easily have bought nuclear technology off of Jared Kushner. The Saudi's got to it first, which is also a concern, because they are ALSO one of the most monied and oppressive regimes in the Middle East. North Korea threatens a lot of people with their ability to randomly launch a nuke. That's pretty much the plot of every Metal Gear game - a few people want a war, more people don't, they work together to prevent nuclear catastrophe.

I'd vote for Hideo Kojima. He gets it apparently, even though his games are...well...more horny than I'd like. I trust him more than Trump or Biden when it comes to matters of consent, which is important.

The US has continued to support (dictators with power) due to their economic influence, which continues to deplete as they run out of oil, so they will continue to diversify. Like, giving the WWE a ton of money to put on shows there. For

instance. Vince MacMahon is a known sexual assailant who has returned to power due to majority rule. Saudi's oppress women. They share that in common.

You get it. It keeps going. We need to at some point, collectively, as humans, put an end to this.

Vasili Alexandrovich Arkhipov knew this. He knew that for there to be life, it has to continue to exist. He prevented an awful choice based on incorrect data.

If we are to emerge from this dark age, he should be who we look back on and say thank you to. To remember. Every politician who has remained on the wrong side of history since then, is an abject failure. I think my favorite president may have to be H.W. Bush now, and Gorbachev my favorite commie (obvs), because they said - LET'S TRY TO GET RID OF THE NUKES. Let's try to end humanity's greatest mistake. WW2 only stopped because the majority overruled the minority, and eliminated the people pushing to continue fighting. More nukes would have been dropped. The Japanese people who said "stop it, you sick fucks" are once again, some of the most important humans to ever exist.

Someone did have to up the stakes unfortunately, otherwise WW2 would've continued until no more humans remained able to fight. But perhaps there is a middle ground. A path between harmony and discord. Perhaps, we should destroy the One Ring.

Currency is, in the modern era, the One Ring. The Infinity Stones. Thanos originally wanted to kill half of the universe because he wanted to impress the goddess Death or whatever, but to simplify it for the movie, he uh...I don't fully understand his motivation. He kinda seems wrong when you think about it. It makes more sense that he wanted to kill half of all known life in the universe because he was horny, unfortunately.

The ruled is ruled by too many horny people given immense power to end it at any time.

For there to be light, we must know darkness. But, even if we end the world in nuclear hellfire, there's a good chance life will live on. The cockroaches, or AI, or what have you must continue to exist for we to be able to know that there CAN exist life in the universe.

There needs to be an in-between for there to be space in the middle. The room between capitalism and communism should always be a spectrum. Interestingly enough, one of the most oppressive regimes in modern history - the PRC, run by a man affectionately referred to as Winnie the Pooh - is where the balance of power is beginning to shift. A "communist" party that LOVES capitalism. They're

succeeding by blending the two, and building up a nuclear arsenal while making the rest of the world incredibly reliant on their output. The US oppressed communists around the globe. The USSR oppressed capitalists across the globe. They still continue to exist, but in more dangerous ways.

We are caught in an infinite struggle between 1 and 0. Between Harmony, and Discord. Between existence, and not existing.

Time is the universal variable. And we want the universe to keep going, for as long as we understand it is able to exist.

The universe must continue to expand, as if it doesn't, a black hole would eventually annihilate life. Light is the fastest known connector between these points - a light year.

If the universe eventually stopped expanding, every black hole would eventually cause light to be imperceptible. Gravity would require it to turn around.

A wormhole - in my current understanding - is the other side of a black hole. Matter must be destroyed (0), but it must also exist (1), otherwise it would be imperceptible.

If humanity wants to learn the true meaning of existence, we have to find out what lies on the other side of a black hole. Christopher Nolan tried this - he thought it was about love i guess - I think that's a weird take. I don't like Interstellar. I probably won't like Oppenheimer. I lowkey think Nolan is pretty dumb, but he continues to get a lot of money for some reason.

2001: A Space Odyssey asks the question in a better way. And that requires 3 things to exist:

Life = X
Death = Y
Time = Z

This is the universal equation of the story, as we currently understand it.

$? = Z(-X + Y)$

If my theory is true, if any of these variables result in a value of 0, or 1, together, there is no story. There is no existence.

1:1 = Error
1:0 = Error
0:1 = Error

3 values need to be present for it to be a number. Otherwise it results in a question - a paradox. The other side of the equation. Which in this equation, is a "?".

I kind of hate periods. But I use them constantly. I feel it better expresses my train of thought. My writing teachers have frequently told me I wheel spin. My writing is best parsed through an editor. If you think you can make this more readable, in whatever language makes the most sense to you, please do. I'll license it as freely as I can. That is the beauty of the public domain, which should be a human right, in perpetuity. Ad space is not worth more than freedom of ideas. Mickey Mouse should not block the public domain forever

My challenge to the world is this. If we do not guarantee a chance at civilization before mutually assured destruction occurs, we will cease to exist.

Personally, I don't think Space should be owned by Billionaires. Elon Musk, Jeff Bezos, the Virgin guy who has a lot of photos where he picks up women. We can not allow AI, or whatever else, to remember us for our worst "leaders".

Elon Musk talking to Vladimir Putin is a threat to humanity's existence. Do you really want Russia - a country with the 2nd most amount of World Enders - to be in debt to the world's richest man? A public disgrace, spending \$44 Billion - \$44,000,000,000 - to lay off 7,000 human beings, so he can silence a public forum for billions? He already bought Trump, and most of the Republican party. The best thing the people's of the world can do is agree that moderation is best. I would like more moderate Republicans and Democrats, balanced by Independents - otherwise money will continue to buy power until we cease to exist.

This is the first writing I'm posting, on the most publicly accessible library we still have. I will license my content mainly for attribution - if you'd like to support me financially, I will work to give you the option. Contact above.

Love, to humanity and all known and unknown life to the universe, until we measure time on a universal scale. But first, we as life on Earth, must come to a collective decision that we'd rather continue living than risk Elon and Putin's Mars expedition. If SpaceX really wants to solve the greatest paradox of our time, they need to cross the event horizon we currently understand as a black hole.

The first human to learn what lies past the center of our galaxy, stands the best chance of learning what comes next. I don't want to hear it from Elon Musk, who is frankly, one of the dumbest people on Twitter. Idiot.

Love,
